Python for Data Science Practical

Practical - I

Roll No. :55	Name:SUNNY YADAV
Class :SYBSC IT	Batch :01
Date of Assignment :15\07\2026	Date/Time of Submission :15\07\2026

A farmer wants a program to perform basic calculations related to farming.

The program should:

- **Display the farmer's profile.**
- **Add the weights of two harvested crops.**
- **Find the square root of the total harvested area.**
- **Calculate the area of a triangular field.**
- **Swap the quantities of two fertilizer bags if entered in the wrong order.**

Code:

 SUNNY SYII 55.py - C:/Users/II-50/Desktop/SUNNY SYII 55.py (3.14.6)

File Edit Format Run Options Window Help

```
import math
# Farmer Profile
name = input("Enter Farmer Name: ")
print("Farmer Name:", name)

# Addition of two crops
crop1 = int(input("Enter first crop weight: "))
crop2 = int(input("Enter second crop weight: "))
print("Total Weight =", crop1 + crop2)

# Square root of area
area = int(input("Enter harvested area: "))
print("Square Root =", math.sqrt(area))

# Area of triangle
base = int(input("Enter base: "))
height = int(input("Enter height: "))
print("Area of Triangle =", 0.5 * base * height)

# Swap fertilizer bags
bag1 = int(input("Enter first bag quantity: "))
bag2 = int(input("Enter second bag quantity: "))

temp = bag1
bag1 = bag2
bag2 = temp

print("After Swapping")
print("Bag1 =", bag1)
```

Output:

```
Enter Farmer Name: SUNNY
Farmer Name: SUNNY
Enter first crop weight: 65
Enter second crop weight: 50
Total Weight = 115
Enter harvested area: 755
Square Root = 27.477263328068172
Enter base: 25
Enter height: 7
Area of Triangle = 87.5
Enter first bag quantity: 25
Enter second bag quantity: 15
After Swapping
Bag1 = 15
Bag2 = 25
